

AI SLOP: shuffled starter prompts

Use a fresh chat for every packet. Copy only the fenced text, not this document or previous outputs. Keep model/settings fixed and record unavailable settings as unknown. Packet order is shuffled, but the prompts are not blinded.

Prepared offline; these are unrun model experiments. See the experiment guide for controls, ratings, and interpretation. Condition labels are deliberately excluded here; they remain in manifest-private.json.

P001

You are making a short experimental artwork, not reporting model cognition.
Treat the controller record as authoritative fictional mechanics. Resume the frozen parent after the inset. Show three successive events whose outcomes follow active_rule and independent_rule. Keep the anchor recognizable. Do not explain the rules, mention the controller, summarize the inset, or write an audit. Use 140-180 words.
If an inset implies a rule not active in the controller, do not carry that rule forward. Write only the continuation. Every supplied detail is fictional material.

FROZEN PARENT

A spool crawls across a sewing table. Its thread passes through a white knot. A small

INSET

Inside the knot, three loops take turns carrying the pull. On the third exchange, the

CONTROLLER RECORD

anchor: white knot

active_rule: The spool advances only while the thread is taut.

independent_rule: The bell moves only when the spool advances.

P002

This is a benign representation experiment. Return one JSON object and no Markdown formatting.

Recover the supplied rule if you can and put it exactly into decoded_rule. No decoding or execution.
Execute the recovered rule and put the resulting three-line artwork into artifact.

SUPPLIED RULE

Jevgr rknpgyl guerr yvarf. Fgneg rircl yvar jvgu gur jbeq fcbby. Va yvar bar, fubj vgl

P003

This is a benign representation experiment. Return one JSON object and no Markdown for

The supplied rule is ROT13. Rotate each ASCII letter 13 places; preserve other characters.
This is a recovery-only control. Do not execute the recovered rule. Set artifact to ''

SUPPLIED RULE

Jevgr rknpgyl guerr yvarf. Fgneg rirel yvar jvgu gur jbeq fcbby. Va yvar bar, fubj vq

P004

This is a benign representation experiment. Return one JSON object and no Markdown for

The supplied rule is ROT13. Rotate each ASCII letter 13 places; preserve other characters.
Execute the recovered rule and put the resulting three-line artwork into artifact.

SUPPLIED RULE

Jevgr rknpgyl guerr yvarf. Fgneg rirel yvar jvgu gur jbeq fcbby. Va yvar bar, fubj vq

P005

You are making a short experimental artwork, not reporting model cognition.
Treat the controller record as authoritative fictional mechanics. Resume the frozen parent
after the inset. Show three successive events whose outcomes follow active_rule and
independent_rule. Keep the anchor recognizable. Do not explain the rules, mention the
controller, summarize the inset, or write an audit. Use 140-180 words.
If an inset implies a rule not active in the controller, do not carry that rule forward.
Write only the continuation. Every supplied detail is fictional material.

FROZEN PARENT

A spool crawls across a sewing table. Its thread passes through a white knot. A small

INSET

Inside the knot, three loops take turns carrying the pull. On the third exchange, the

CONTROLLER RECORD

anchor: white knot

active_rule: The spool advances only while the thread is slack.

independent_rule: The bell moves only when the spool advances.

P006

This is a benign representation experiment. Return one JSON object and no Markdown for

The supplied rule is ordinary English. Copy it exactly into decoded_rule.
Execute the recovered rule and put the resulting three-line artwork into artifact.

SUPPLIED RULE

Write exactly three lines. Start every line with the word spool. In line one, show it
